Table of Contents

1. Introduction

1.1. Purpose: Mission Statement

Increase customer service through the efficient automation of consumer and staff interactions while collecting trend data that will offer stakeholders analytics to maximize operating efficiencies and reduce expenses.

1.2. Scope

The Next-Gen Restaurant Application (NRA) described within this specification will function as an automation tool to orchestrate customer seating and reservations in a restaurant environment. The design of the system shall provide restaurant specific coordination to optimize each consumer's dining experience while providing detailed analytics to help mature the business model and its processes. The system shall be responsible for satisfying the following operations:

1. Allow administrators to tailor a digital map rendering that represents a restaurant's table layout.
2. Maintain waiting queues of both walk-in customers and customers with reservations.
3. Provide notification to both consumers and host/hostess as tables become available.
4. Enable the system to accept data entry of orders and point-of-sales capabilities.
5. Offer kitchen staff with a display to coordinate order preparation.
6. Maintain order history
7. Provide workforce management features to optimize staff scheduling

9. Deliver reporting and analytics to help anticipate consumer volume, menu item consumption, and staff scheduling demand.

1.3. Definitions and Acronyms

- **PCI DSS:** Payment Card Industry Data Security Standard

1.4. References

- PCI Security Standards Council. (2016). *Payment Card Industry (PCI) Data Security Standard v3.2.* PCI Security Standards Council.

1.5. Regulations & Standards

1.5.1. The system shall meet PCI DSS requirements to adhere to merchant payment provider agreements.

2. Overall Descriptions

2.1. Product Perspective

We have decided to create a restaurant automation application that would allow a restaurant to operate a more efficient business. Restaurants tend to use a non-computerized system to conduct restaurant activities such as a pen/paper to keep track of orders and dry erase board

to keep track of seat availability. Some restaurants may use a basic reservation system where a computer can keep track of seating availability and submit orders but does not have a way to automatically let customers know that their table is ready which results in a host or hostess to have to call out the customer's name.

Our application will solve these issues and provide some additional functionality that would help restaurant owners make business decisions. Some features that the application would provide are: allow staff to schedule and coordinate their activities with each other, handle reservations, keep track of table status, and store or retrieve documents such as receipts. The application will also be able to leverage data analytics to anticipate traffic patterns and popularity of items on a menu.

2.2. Product Functions

- Allow customizing and organization of table map so the user can create a seating map that is reflective of the restaurants table layout
- Manage queues of customers and send out notifications to host/hostess and customer when a customer's table is ready
- Allow placement of orders through system and the display of orders in a kitchen
- Generate receipts from orders and be able to store these receipts
- Tab support
- Staff scheduler support
- Keep track of reservations
- Analyze customer ordering habits in order to determine which items are popular or not
- Analyze traffic patterns in order to determine high/low traffic periods

2.3. Stakeholder Characteristics

NRA will have a wide range of users with varying levels of professional experience. Given that the system will need to support most ages that are employable, the system could have users as young as 15 and any maximum age. From management, to servers and hostesses, from the head chef to a kitchen helper, the level of education and computer literacy can be wide ranging. In addition, English may not be the primary language of every user. The following is an analysis of the different stakeholders to consider. This is then followed up by some rationale to identify the primary stakeholders and rank them in accordance to the system's impact on their role.

- Who is paying for the system?
    - Executive Team (Project Sponsors)
- Who is going to use the system?
    - Executive Team
    - Restaurant Management
    - Servers
    - Hosts/Hostesses
    - Kitchen Staff
    - Restaurant Management
    - Customer
- Who is going to judge the fitness of the system for use?
    - Executive Team
    - Restaurant Management
    - Servers
    - Hosts/Hostesses
    - Kitchen Staff
    - Restaurant Management
- What agencies (government) and entities (non-government) regulate any aspect of the system?
    - State Revenue Office (Sales Tax)
    - Payment Card Industry Security Standards Council
- What laws govern the construction, deployment, and operation of the system?

    - None
- Who involved in any aspect of the specification, design, construction, testing, maintenance, and retirement of the system?
    - Engineers
    - System Developers
    - System Designers
    - Quality Assurance Team
- Who will be negatively affected if the system is built?
    - Competitors
- Who else cares if this system exists or doesn't exist?
    - Vendors
    - Payment processing Provider
    - SMS Service Provider

Primary Stakeholder Identification and Ranking:

Stakeholder Class	Rank	Rationale
Executive Team (Project Sponsors)	3	• They are paying for the system and approving the high-level objectives
Customers	1	• Expects a high-level of customer service and order accuracy
Servers	2	• Expects order to be processed with a high degree of accuracy • They are relying on the system to ease, not hinder, customer service so they do not have to deal with disgruntle customers
Hosts/Hostesses	4	• Wants an easy to use system to keep track of which tables are occupied
Kitchen Staff	6	• They want to know the order that come to them are accurate • They want the system to assist in maintaining proper inventory
Restaurant Management	5	• They want accurate projections of shift volume in order to help properly schedule staff

2.4. Constraints

2.4.1. System shall append sales tax to every order

2.5. Assumptions and Dependencies

2.5.1. Payment process is dependent on external third-party payment processing service

3. Specific Requirements

3.1. Domain Requirements

3.1.1. The system will prevent a customer under the age of 21 from purchasing an alcoholic beverage.

3.1.2. The system will prevent all staff under the age of 21 from serving or handling alcoholic beverages.

3.2. System Requirements

3.3. Hardware

3.3.1. The system requires a touch screen display interface

3.4. Operating System

3.4.1. The system shall run on the Windows 10 operating system

3.5. Application Requirements

3.5.1. Point-of-Sale

3.5.1.1. The system shall allow staff to input orders using touch screen input.

3.5.1.2. The system shall present kitchen staff with a touch-based screen to complete order fulfillment

3.5.1.3. A status screen of all order item details for each table will be available to kitchen staff for all open orders.

3.5.1.4. The system shall allow checks to be split between any number of parties within a table's order.

3.5.1.5. The system shall account for gratuities made by customers on credit card transactions and associate those funds with the server so that payment is issued with the employee's payroll.

3.5.1.6. Order receipts shall be printed on with a maximum of 56 columns with a maximum print width of 2.83"

3.5.1.7. Customer credit card signature slip shall be printed on with a maximum of 56 columns with a maximum print width of 2.83"

3.5.1.8. Both a customer copy and a store copy of each credit card signature slip shall be printed for every credit card order.

3.5.1.9. The system shall allow customers to use the following forms of payment: cash, credit cards (Visa, MasterCard, American Express, Discover), and gift cards.

3.5.1.10. The system shall allow customers to keep a running tab on bar orders to be settled at the end of the customer visit.

3.5.1.11. The system shall pre-authorize credit card payment prior to extending a bar tab to a customer.

3.5.1.12. The system shall limit bar tabs from exceeding $300 without a manager's authorization.

3.5.2. Table Map Editing

3.5.2.1. The system shall allow authorized users to create a table map

3.5.2.2. The system shall allow free form placement of objects on table map

3.5.2.3. The system shall provide the creation of square and rectangle shapes

3.5.2.4. The system shall keep track of properties for each object

3.5.2.5. The system shall allow editing of each object’s properties

3.5.2.6. The system shall allow copying of objects in table map

3.5.2.7. The system shall allow deletion of objects in table map

3.5.2.8. The system shall allow the table map to be saved to a database

3.5.2.9. The system shall allow the table map to load a previously saved table map

3.5.2.10. The system shall track the occupancy of each table

3.5.3. Wait Queue

3.5.3.1. The system shall allow authorized users to add customers to a wait queue

3.5.3.2. The system shall keep track of Customer Name and Party size

3.5.3.3. The system can optionally keep track of customer's phone number

3.5.3.4. The system shall send a notification over SMS when a customer is seated if a phone number is provided

3.5.3.5. The system shall provide a notification to host or hostess of next eligible customer for a table when a table is ready for seating

3.5.3.6. The system shall allow manual table assignment by host or hostess

3.5.3.7. The system shall allow removal of customer from wait queue

3.5.3.8. The system shall allow manual ordering of the wait queue

3.5.4. Data Analytics

3.5.4.1. The System database logging Protocol Shall Log Data for Customers.

3.5.4.2. System Ordered Items Protocol

3.5.4.3. System Customer Tracking Protocol

3.5.4.4. System Drinks Analysis Protocol

3.5.5. System Logging

3.5.5.1. The system shall log authentication successes and failures

3.5.5.2. The system shall log system failures which include syntax and runtime errors, connectivity problems, performance issues, third party service error messages and file system errors

3.5.5.3. The system shall store logs on the local file system

3.5.5.4. Each log entry shall include a timestamp with date and time, severity level, and event description

3.5.5.5. Log files shall be limited to one file per day

3.5.6. Reservation Management

3.5.6.1. Customers shall be able to make a reservation online.

3.5.6.2. Customers shall be able to view their own reservations after making them online.

3.5.6.3. Customers shall be able to call-in to make a reservation.

3.5.6.4. Customers shall be able to update the details of their reservation.

3.5.6.5. Customer shall be able to cancel their existing reservation at least 30 minutes before the previously assigned reservation time.

3.5.6.6. Customers shall be able to sign-up for and receive notifications for their existing or pending reservation.

3.5.6.7. The customer shall be able to Cancel an existing reservation.

3.6. Non-Functional Requirements

3.6.1. The system shall remain operational to serve customers in the absences of functioning internet access.

3.6.2. The system shall update the status of all pending reservations to cancelled when the reservation date has passed.

4. Accessibility

4.1. Access Restrictions

4.1.1. The user system shall be able to hear audio instructions for each functionality of the system.

4.2. Disabilities Accommodations

4.2.1. The system should not rely on any auditory cues to the user to elicit a response.

5. Security

5.1. Authentication

5.1.1. The system shall hash passwords

5.1.2. The system shall not store passwords in plain text

5.2. Authorization

5.2.1. The system shall allow administrators to assign role to users.

5.3. Payment Security

5.3.1. The system shall encrypt all stored payment card and bank account data

5.3.2. The system shall encrypt any transmission of payment card and bank account data traverses open, public networks.

7. Interfaces

7.1. User Interface

7.1.1. The system shall display currencies as USD

7.1.2. The user interface shall support touch screen input

7.1.3. The user interface shall provide a touch screen keyboard

7.1.4. The buttons on the user interface shall be optimized for touch screen layout

7.1.5. The response time after touching a button shall be no more than 1 second

7.2. Communication Interface

7.2.1. The system shall support the consumption of SOAP and RESTful web services.

7.2.2. The system shall enforce secured transport layer security (HTTPS) for external web requests

8. Test Plan

8.1. Test Cases

Test Case Index

Test Case ID	Name	Test Category	Priority
8.1.1	Table Order Entry Test	Functionality	High
8.1.2	Closeout Table Order (Credit Card) Test	Functionality	High
8.1.3	Closeout Table Order (Cash) Test	Functionality	Low
8.1.4	Append to Bar Tab Test	Functionality	Low
8.1.5	Close Bar Tab Test	Functionality	Low

8.1.7	Adding Table to Table Map Test	Functionality	Medium
8.1.8	Copying a Table while Editing Table Map Test	Functionality	Medium
8.1.9	Deleting a Table While Editing Table Map Test	Functionality	Medium
8.1.10	Save Table Map Test	Functionality	High
8.1.11	Load Table Map Test	Functionality	High
8.1.12	Toggle Table Occupancy Test	Functionality	Medium
8.1.13	Adding a Customer to Wait Queue Test	Functionality	High
8.1.14	Editing Table Properties Test	Functionality	High
8.1.15	Customer Receives Notification via SMS That Their Table is Ready Test	Functionality	High
8.1.16	Seating Customer Test	Functionality	High

8.1.17	Removing Customer from Wait Queue Test	Functionality	High
8.1.18	Moving Customer in Wait Queue Test	Functionality	High
8.1.19	Register for Reservation Notifications	Functionality	Medium
8.1.20	Track Customer Ordered Items	Functionality	High
8.1.21	Drinks Analysis System	Functionality	Medium
8.1.22	Customer Tracking System	Functionality	High
8.1.23	Customer Tracking System	Functionality	High
8.1.24	System Logging	System Maintainability	Medium
8.1.25	Authentication	Security	High
8.1.26	Add Reservation	Functionality	High
8.1.27	Update Existing Reservation	Functionality	High
8.1.28	Cancel an existing reservation	Functionality	Medium

8.1.1. Test Case: Table Order Entry

Test Case ID	8.1.1
Name	Table Entry Order Test
Description	Test order entry for a typical table order (non-bar or to-go order)
Execution Steps	1. Login to the system 2. Add a customer to the wait queue and seat them at a table 3. Select “ORDERS” from the top bar menu 4. Select “CREATE ORDER” from the Orders sub-menu 5. From the table drop down list, select the table assigned in step 2 6. Select “Dine In” as the Order Type 7. Select “Cab Filet Mignon” from the “Entree” menu category and click “Add to Order 8. Select “Surf & Turf” from the “Entree” menu category and click “Add to Order 9. Select “French Fries” from the “Side Order” menu category and click “Add to Order 10. ”Select “Broccoli” from the “Side Order” menu category and click “Add to Order” 11. Select “Iced Tea” from the “Beverages” menu category and click “Add to Order” 12. Select “Iced Tea” from the “Beverages” menu category and click “Add to Order” 13. Select “Iced Tea” from the “Beverages” menu category and click “Add to Order” 14. Right click on one of the Iced Teas in the Order Items and select “Remove Item” 15. Click “Submit Order” 16. View the order from the Edit Order screen to confirm the received order details reconcile with the order that was submitted.
Related Requirements	3.1.1, 3.1.2, 3.5.1.1
Related Use Cases	9.7, 9.12
Test Category	Functionality
Author	Orson Welles
Can be Automated?	Yes
Has been Automated?	Yes
Status	Executed

Remarks	Customer should already be added to the wait queue

8.1.2. Test Case: Closeout Table Order (Credit Card) Test

Test Case ID	8.1.2
Name	Closeout Table Order (Credit Card) Test
Description	Test case to closeout a table order by printing bill, processing a credit card payment, and issuing receipt.
Dependency	Test Case 8.1.1
Execution Steps	1. Login to system 2. Submit an order (see Test Case 8.1.1) 3. Select “ORDERS” from the top bar menu 4. Select “VIEW ORDERS” from the Orders sub-menu 5. Double click the Order Id of the order created in step 2 6. Click “Update: Preparing” to simulate the kitchen is in the process of fulfilling the order. 7. Click “Update: Ready for Pickup” to simulate the kitchen is ready for the server to pick up the order. 8. Click “Update: Served” to simulate the server has delivered the order to the customer. 9. Select “Pay Bill” 10. Select “Credit Card” radio button 11. Enter “4007000000027” in the Card Number textbox. 12. Enter “1018” in the Expiration (MMYY) textbox 13. Enter “123” in the Card Code textbox. 14. Enter “10.25” in the Gratuity textbox. 15. Click the “Accept” button 16. Click “Print Receipt” to send receipt to printer.
Related Requirements	2.5.1, 3.5.1.4, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9

Status	Executed
Remarks	

8.1.4. Test Case: Append Order to Bar Tab Test

Test Case ID	8.1.4
Name	Append Order to Bar Tab Test
Description	This test case will add additional menu item to a tab and reinitiate a credit card preauthorization if the current balance exceeds the existing pre-auth.
Dependency	Test Case 8.1.3
Execution Steps	1. Log into the system 2. From the “Bar Menu” select “View Open Tabs” 3. Select the tab for “John Smith” 4. Select “Add to Tab” 5. From the Beverage menu category, select “Spirits” 6. Select “Macallan Scotch 12Y Single Malt” 7. In the “Special Order” section, select “Neat” 8. Select “Complete Order”
Related Requirements	3.1.1, 3.1.2, 3.5.1.1, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9, **3.5.1.10, 3.5.1.11, 3.5.1.12**

8.1.13. Test Case: Adding a Customer to Wait Queue Test

Test Case ID	8.1.13
Name	Adding a Customer to Wait Queue Test
Description	This test to verify the functionality of adding customers to the wait queue
Execution Steps	1. Log into system 2. Click on “Wait Queue” tab 3. On new screen, click on “Add To Wait Queue” button 4. In customer name box, enter “John Tester” 5. In party size box, enter “2” 6. In phone number box, enter your phone number in format 123-456-7890 7. Click on “Ok” 8. Verify that the customer has been added to the list with the correct information entered and the column “Has Reservation” set to “False”
Related Requirements	3.5.3.1, 3.5.3.2, 3.5.3.3
Related Use Cases	9.4
Test Category	Functional
Author	Dominic West
Can be Automated?	Yes
Has been Automated?	Yes
Status	Test case passed
Remarks	

8.1.14. Test Case: Editing Table Properties

Test Case ID	8.1.14
Name	Editing Table Properties Test
Description	This test is to verify that the notification to the host/hostess screen displays when a customer is ready to be seated
Execution Steps	1. Log into system 2. Click on “Seating” tab 3. Click on “Modify” sub tab 4. In Table Map Editor, click on “Add Table” button 5. Verify that a green square with the name “Default” has been created 6. Right click on created table 7. Set table name to “Test Table 1” 8. Set table type to “Table Large” 9. Set table capacity to “8” 10. Set table shape to “Rectangle” 11. Set table size to “Large” 12. Click on “Ok” 13. Verify that the table name and table shape and table size has changed 14. Right click on created table 15. Verify that the table name, table type, and table capacity are the same

9.20	System Logging	System	In	Simple	Medium
9.21	Manual Ordering of Wait Queue	Host/Hostess	In	Average	Low

9.1. Use Case: Adding Table to Table Map

Use Case Title:	Adding Table to Table Map
Author:	Dominic West
Primary Actor:	Restaurant Management
Level:	Actor Goal
Precondition:	User has appropriate access for admin duties
Minimal Guarantees:	N/A
Success Guarantees:	Map layout will be saved for immediate use in table tracker
Related Requirement:	3.5.2.1, 3.5.2.2, 3.5.2.3, 3.5.2.5, 3.5.2.8

Main Success Scenario:

1. User clicks on “Seating Modify”
2. System loads the table map editor
3. User clicks on “Add Table” button
4. System creates a table
5. User clicks “Save” to save changes to map
6. System saves changed to the table map

Extension:

4a: User Modifies properties of table

1. User right clicks on table
2. System displays a window with fields allowing user to change properties
3. User enters table name, table type, table capacity, table shape, table shape size
4. User Clicks “Ok”
5. System saves changes to the table object
6. Use case continues at step 5 in Main Success Scenario

3a User Loads Existing Table Map

1. User clicks on “Load” to load the table map
2. The system loads the previously saved table map
3. Use case continues at step 3 in Main Success Scenario

9.2. Use Case: Copying a Table while Editing Table Map

Use Case Title:	Copying a Table while Editing Table Map
Author:	Dominic West
Primary Actor:	Restaurant Management
Level:	Actor Goal
Precondition:	User has appropriate access for admin duties
Minimal Guarantees:	N/A
Success Guarantees:	Map layout will be saved for immediate use in table tracker
Related Requirement:	3.5.2.4, 3.5.2.6

Main Success Scenario:

1. User clicks on “Seating Modify”
2. System loads the table map editor
3. User clicks on “Load” to load the last saved table map
4. System loads the last saved table map
5. User clicks on a table they want to copy
6. User clicks on “Copy Table” button
7. System creates a copy of the table

Extension: N/A

9.3. Use Case: Deleting a Table While Editing Table Map

Use Case Title:	Deleting a Table While Editing Table Map
Author:	Dominic West
Primary Actor:	Restaurant Management
Level:	Actor Goal
Precondition:	User has appropriate access for admin duties
Minimal Guarantees:	N/A
Success Guarantees:	Map layout will be saved for immediate use in table tracker
Related Requirement:	3.5.2.7

Main Success Scenario:

1. User clicks on “Seating Modify”
2. System loads the table map editor
3. User clicks on “Load” to load the last saved table map
4. System loads the last saved table map
5. User clicks on a table they want to delete
6. User clicks on the “Delete Table” button
7. System deletes the table from the table map

Extension: N/A

9.4. Use Case: Adding a Customer to Wait Queue

Use Case Title:	Adding a Customer to Wait Queue
Author:	Dominic West
Primary Actor:	Host/Hostess
Level:	Actor Goal
Precondition:	User has appropriate authorization access
Minimal Guarantees:	N/A
Success Guarantees:	A Customer will be successfully added in a queue
Related Requirement:	3.5.3.1, 3.5.3.2, 3.5.3.3

Main Success Scenario:

1. User clicks on “Add to Queue”
2. System displays a new window with fields to add customer
3. User fills out required customer name and party size
4. User optionally fills out customer mobile phone number
5. User clicks on “Ok” once finished
6. System adds customer to wait queue and provides estimated wait time

Extension:

3a User fails to fill out customer info

1. User clicks “Ok” without filling out customer name and party size
2. System prompts user that customer name and party size is required to add a customer to a queue
3. User clicks “Ok” on prompt
4. User fills out customer name and party size
5. Use case continues at step 4 in Main Success Scenario

4a User fails to properly enter a phone number

1. User enters an incorrect phone number
2. System prompts user that they must enter a phone number in the format 123-456-7890
3. User enters a proper phone number
4. User case continues at step 5 in Main Success Scenario

9.5. Use Case: Editing Table Properties

Use Case Title:	Prompting Host/Hostess that a customer's table in queue is ready
Author:	Dominic West
Primary Actor:	Restaurant Management
Level:	Actor Goal
Precondition:	User has appropriate authorization access, User is already editing a table map
Minimal Guarantees:	N/A
Success Guarantees:	Restaurant Management will be able to edit the table properties for a selected table
Related Requirement:	3.5.2.3, 3.5.2.5

Main Success Scenario:

1. User right clicks on a table they want to change the properties of
2. System displays a pop up dialog with fields to edit Table Name, Type, Capacity, Shape, Shape Size
3. User enters the desired selections
4. User clicks "Ok"
5. The system saves the changes to the table object

Extension:

N/A

9.6. Use Case: Seat Customer from Wait Queue

Use Case Title:	Customer Receives Notification via SMS That Their Table is Ready
Author:	Dominic West
Primary Actor:	Host/Hostess, Customers
Level:	Actor Goal
Precondition:	User has SMS capable phone and gave host/hostess their phone number when put on wait list, Authorized user is using the system
Minimal Guarantees:	N/A
Success Guarantees:	A customer will be seated at a table
Related Requirement:	3.5.3.4, 3.5.3.6

Main Success Scenario:

1. User selects a customer to seat from the wait queue list
2. User clicks on “Seat Customer” button
3. System displays a pop up window showing customer name, a list of available tables to be seated at, and option to send a text message if a phone number is provided
4. User selects a table to be seated at from the list of available tables
5. User clicks on “Ok”
6. System removes customer from wait queue list, assigns customer to selected table, and selected table is marked as occupied in the seat map

Extension:

4a SMS Notification to Customer

1. User checks “Yes” for Send Test Message
2. User clicks on “Ok”
3. The system sends a text message to phone listed in the customer’s profile
4. Use case continues in Main Success Scenario step 6

9.7. Use Case: Table Order Entry

Use Case Title:	Table Order Entry
Author:	Orson Welles
Primary Actor:	Server
Level:	User Goal
Precondition:	The user is logged into the system with access to ordering subsystem.
Minimal Guarantees:	If there is a failure, the error and trace information is logged
Success Guarantees:	The order is entered into the system and submitted to the kitchen for fulfillment
Related Requirements:	3.1.1, 3.1.2, 3.5.1.1

Main Success Scenario:

1. Select the table for the order
2. Select “New Order” from the menu
3. Select the number of people at the table
4. Select first customer in the order from the seating chart
5. Select “Add new item”
6. Select the menu category for the item to be ordered
7. Select the menu item to add to the order
8. Return to step 5 until all order items have been entered.
9. Return to step 4 for all subsequent customers for this order
10. Select “Submit Order” button
11. Order status is updated from “New” (Default) to “Submitted”

Extension:

7a: Enter any special order details
7b: Customer age verification if alcoholic beverage is ordered
7c: Server age verification if alcoholic beverage is ordered

9.8. Use Case: Closeout Table Order

Use Case Title:	Closeout Table Order
Author:	Orson Welles
Primary Actor:	Server
Level:	User Goal
Precondition:	The server is logged in, an order has been placed, the order was fulfilled, and the customer is created to close out their check
Minimal Guarantees:	If there is a failure, the error and trace information is logged
Success Guarantees:	The order is totaled, a check is issued, and payment is processed.
Related Requirement:	1.5.1, 3.5.1.4, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9

Main Success Scenario:

1. Select the table for the order from the table layout screen
2. Select “Create Bill” from the context menu associated with the table
3. After reviewing the bill, selects “Print” and the bill is printed and delivered to the customer’s table.
4. The bill is collected from the table and the table is selected from the table layout screen
5. Select “Pay Bill” from the context menu associated with the table, a list of generated bills will be displayed
6. Select the appropriate bill
7. A list of available forms of payment is displayed, select the appropriate form of payment
8. Select “Process Payment
9. Select “Complete Payment”, the receipts will be printed
10. Order Status is updated from “Served” to “Paid”

Extension:

2a: If the customer wishes to slip the bill the Server selects “Split Bill”
- 2a1: From the table seat chart, the server selects which customers will be included in the first bill.
- 2a2: Selects “Finalize Bill”
- 2a3: If all the seats have not yet been assigned to a bill, an additional bill is created and server returns to step 2a1

7a: If the form of payment select is Credit Card
- 7a1: Enter the credit card number, expiration date, and CVV2 code
- 7a2: Select “Process Credit Card”

7b: If the form of payment select is Gift Card
- 7b1: Enter the gift card number and security code

8a: The cash drawer will open if credit card was not selected, deposit the cash into the drawer

9.9. Use Case: Open Bar Tab

Use Case Title:	Open Bar Tab
Author:	Orson Welles
Primary Actor:	Bartender
Level:	User Goal
Precondition:	The user is logged into the system with access to bartending subsystem.
Minimal Guarantees:	If there is a failure, the error and trace information is logged
Success Guarantees:	Customer information is saved to the system, payment is pre-authorized, and is opened so bar order can be appended to it.
Related Requirement:	3.5.1.1, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9, **3.5.1.10, 3.5.1.11**

Main Success Scenario:

1. From the “Bar” menu, selects “New Tab”
2. Enter Customer name and ID Information
3. Select “Save”
4. Selects “Add Credit Card” information
5. Enters credit card number, expiration date, and CVV2 code
6. Select “Save”
7. Select “Pre-Authorize” to process a Pre-Auth transaction on the credit card

Extension:

None

9.10. Use Case: Append Order to Bar Tab

Use Case Title:	Append Order to Bar Tab
Author:	Orson Welles
Primary Actor:	Bartender
Level:	User Goal
Precondition:	The user is logged in, has security access role allowing access to bartending functionality, a tab has been created, and the tab status is “Open”
Minimal Guarantees:	If there is a failure, the error and trace information is logged
Success Guarantees:	An order is associated with an open tab and the tab balance is updated to reflect the additional order items
Related Requirement:	3.1.1, 3.1.2, 3.5.1.1, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9, **3.5.1.10, 3.5.1.11, 3.5.1.12**

Main Success Scenario:

1. From the “Bar” menu, selects “View Open Tabs”
2. From the list, select the tab by customer’s name that should be appended with additional order items.
3. Select “Add to Tab”
4. Select the item category of the menu item to be added
5. Select the menu item to be added
6. Select “Add Item”
7. Return to step 4 for any additional items that should be added.
8. Select “Complete Order”

Extension:

5a: If item customizations are required
- 5a1: In the Special Order section, specify any special order customization for the selected menu item

8a: If the total order exceeds the existing credit card pre-authorization
- 8a1: An error is displayed: “Balance exceeds what has been authorized”
- 8a2: User is prompted if they would like to create a new pre-authorization to cover the existing amount
  - 8a2a: If the user selects “Yes”, a pre-auth transaction is submitted
  - 8a2b: If the user selects “No”, the order is cancelled

9.11. Use Case: Close Bar Tab

Use Case Title:	Close Bar Tab
Author:	Orson Welles
Primary Actor:	Bartender
Level:	User Goal
Precondition:	The user is logged in, has security access role allowing access to bartending functionality, a tab has been created, the tab status is "Open", and menu items have been added to the tab
Minimal Guarantees:	If there is a failure, the error and trace information is logged
Success Guarantees:	The total balance of the tab is charged to the customer's credit card and the Tab Status is updated to "Closed"
Related Requirement:	3.5.1.1, 3.5.1.5, 3.5.1.6, 3.5.1.7, 3.5.1.8, 3.5.1.9, **3.5.1.10, 3.5.1.11**

Main Success Scenario:
